

- regulation of DNA repair
- oligodendrocyte development
- regulation of cell junction assembly
- DNA repair
- peptidyl-lysine modification
- cholesterol biosynthetic process
- positive regulation of immune response
- mRNA transcription by RNA polymerase II
- xenobiotic transport
- protein localization to membrane
- positive regulation of phosphorus metabolic process
- response to fatty acid
- cellular aldehyde metabolic process
- positive regulation of translation
- digestive system development
- cilium assembly
- regulation of immunoglobulin production
- regulation of mitotic metaphase/anaphase transition
