

- smooth muscle cell migration
- microtubule cytoskeleton organization
- modification-dependent macromolecule catabolic proc
- enzyme-linked receptor protein signaling pathway
- regulation of actin filament-based process
- regulation of neuron projection development
- muscle structure development
- phosphorylation
- positive regulation of hydrolase activity
- regulation of system process
- positive regulation of bone resorption
- tRNA metabolic process
- regulation of ERK1 and ERK2 cascade
- mitochondrion organization
- nuclear division
- biological process involved in symbiotic interaction
- glycerolipid biosynthetic process
- dicarboxylic acid metabolic process
- epithelial cell apoptotic process
- microtubule nucleation
