

- muscle structure development
- modification-dependent macromolecule catabolic proc
- microtubule cytoskeleton organization
- regulation of protein transport
- regulation of nervous system development
- positive regulation of GTPase activity
- regulation of system process
- actin filament-based process
- phosphorylation
- protein localization to organelle
- regulation of small GTPase mediated signal transduc
- muscle cell differentiation
- regulation of cytoskeleton organization
- regulation of cold-induced thermogenesis
- cell population proliferation
- positive regulation of protein modification process
- carbohydrate metabolic process
- cellular homeostasis
- cell-substrate adhesion
- glycoprotein metabolic process
