

- microtubule cytoskeleton organization
- DNA metabolic process
- RNA biosynthetic process
- regulation of cellular response to stress
- response to radiation
- protein localization to cell periphery
- cell-cell adhesion
- cytoskeleton-dependent intracellular transport
- regulation of cell cycle phase transition
- positive regulation of phosphorus metabolic process
- cell junction organization
- protein localization to cell junction
- sulfur compound metabolic process
- organic hydroxy compound metabolic process
- regulation of interferon-beta production
- mismatch repair
- regulation of cell-substrate adhesion
- positive regulation of cellular component biogenesis
- positive regulation of blood-brain barrier permeability
- supramolecular fiber organization
